

Injector six-packs

For ISX engines

Injector six-packs are now released for ISX engines. Six-packs allow service providers and customers to order a quantity pack of six injectors at a reduced price to purchasing injectors individually.

Six-pack injectors also include six fuel supply connectors and promote customers to replace all injectors instead of replacing them individually when a failure occurs. By proactively replacing all six injectors, customers can maximize their service event and potentially reduce future downtime.

Injector six-pack benefits:

- Bundled parts savings
- Comprehensive repair
- Reduced downtime and labor cost
- All injectors will have the same warranty terms
- Genuine Cummins quality
- Improved fuel economy
- Increased engine life
